General Comment:

On 1/9/2020 COGCC staff, Kris Neidel was present to witness the groundwater investigation that is a part of Remediation Project #14686 at the Maudlin tank battery. Weather was 25 degrees and cloudy with some flurries. Wesco was finishing completing the well at the third boring location (North of pit). The rig was mobilized to the fourth boring location on the west side of the former cuttings pit. Gray silty soil was observed from 4'-12', soil appeared to have hydrocarbon impact, a soil sample was collected of what appeared to be most impacted zone. 15'-17' had black silty clay, 20' had tan dry clay. Static groundwater level appeared to be 10'-12'. A well was completed at this location and screened from 7'-20'. No water samples were collected, it is expected that water samples will be collected the week of 1/27/2020.
