General Comment:

On 1/28//2020 COGCC staff Kris Neidel was present at the Maudlin Gulch Tank battery to witness the sampling of four groundwater monitoring wells as part of Remediation Project 14686. Weather was 27 degrees, clear, snow had fallen the previous night. All wells were first gauged for water depth. Then observed for any free product by gently placing the bailer in the well, and pulling out 8-10" of water. Then all wells were purged of at least 4 casing volumes. Purged water was handled as E&P waste. Prior to collecting samples, wells were gauged again to determine that they had recovered from purging. Water collected will be sampled for COGCC 609 groundwater standards. Emissions combustor was burning at the time of inspection. The pit that is a part of REM Project 14686 is open and was cover

Environmental**Waste Management:**

Type	Management	Condition	GPS (Lat)	(Long)
Drill Cuttings	Piles	Adequate		
Comment	The cuttings from the groundwater monitoring wells were stored in a bermed area with a plastic liner south of the old soil storage area.			
Corrective Action	The cuttings should be removed as soon as practicable, no later than June 1 2020.			Date: 06/01/2020
