Operator  
Comment:

At the time of the inspection, storm water from the well pad was accumulating in a flat portion of the interim reclamation area located east of the pad. The cultivation pattern east of the pad provided channels for the storm water to travel south where the ground surface changes from flat to a positive grade which concentrated runoff and caused some soil erosion. A Kinder Morgan contractor was mobilized to re-grade the CB-3 well location and modify the surface drainage of the graveled well pad on October 17, 2019. The re-graded well pad now directs runoff away from the east and south toward the County Road borrow ditches located north and west of the location. See attached response and photos.

COGCC Decision: Approved pending re-inspection
