General Comment:

On 3/18/2020 Catherine Roy conducted a reclamation and stormwater inspection. During this inspection the following compliance issues were observed:

Stormwater erosion needs to be controlled within the project area by 4/24/2020.

See below, and attached photos for additional detail.

Comment Revegetation is progressing within the majority of the interim reclamation area, although remains sparse along cut-slopes at well pad entrance and portions of the southern edge of the working area (see corrective action under "Stormwater" below). Weeds were not observed at this time, although it is early in the growing season and weeds may not be observable. Continued monitoring and treatment (as needed) needs to be conducted.

Comment:	<p style="color: blue; margin: 0;">Berms and cut-slopes near the well pad entrance/southern edge of the working area are largely bare and not stabilized. Additionally, an area on the eastern edge of the access road where stormwater flows onto the access road is channeling and causing erosion. Cobble bars are placed in diversion channels since 2018 reclamation inspection.</p>	
Corrective Action:	<p style="color: red; margin: 0;">Erosion controls (ie blankets, revegetation) are needed on bare soils until stabilized with desirable perennial vegetation. Stormwater controls (BMPs) are needed at run-on point along access where erosional channeling is occurring.</p>	Date: <u>04/24/2020</u>
Pits: <input checked="" type="checkbox"/> NO SURFACE INDICATION OF PIT
