OPERATOR COMMENT

For review by John Heil

Remediation of PW release is completed. Soil samples are below 910-1. FAQ 32-EC and SAR are elevated within three feet of the ground surface because elevated levels of pH, SAR, and EC in deeper soils should not adversely affect the successful reclamation of the site, which is in the objective of these concentration levels. Due to freezing conditions PW was unable to saturate ground.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
