General Comment:

On 4/3/2020 Catherine Roy conducted a reclamation and stormwater inspection. Document 400650328 describes plugging the well on 7/21/2014. Final reclamation should have been conducted no later than 2015. During this inspection the following compliance issues were observed:

-Final reclamation needs to be conducted per COGCCs 1004 reclamation rules. This is the second corrective action to conduct final reclamation at this location.

Operator is directed to perform corrective actions outlined on this inspection report immediately. Doing so may decrease the duration of alleged violations and the penalties that may be assessed pursuant to Rule 523. Corrective action dates are not assigned as it is the expectation that the location be at or near completed final reclamation when inspection is conducted in response to Form 4 request for final reclamation, as well as a followup to previous corrective actions.

This final reclamation inspection was conducted in response to the operator submitting official documents to imply or directly state that final reclamation is complete per a final reclamation inspection request and/or a bond release request. Upon inspection, it is evident that significant elements of final reclamation are not complete. Per COGCC rules, submission of falsified documentation can be considered an aggravating factor if, or when, enforcement actions are recommended.

See below, and attached photos for additional detail.

Storm Water:

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment

Comment: -Stormwater erosion needs to be controlled throughout the reclamation process.

Corrective Action: Stormwater BMPs and erosion controls such as mulch, blankets, etc. will be needed throughout the project area, until stabilized with desirable perennial vegetation.

Date: _____

Pits: ☐ NO SURFACE INDICATION OF PIT
