General Comment:

On 7/9/2020 Catherine Roy conducted a reclamation and stormwater inspection. During this inspection the following compliance issues were observed:

Weeds need to be controlled by 11/1/2020. Due to the nature and extent of the infestation a multipronged treatment approach will be needed, as well as subsequent monitoring and control.

See below, and attached photos for additional detail.

Comment	Approximately 2000 Russian knapweeds observed throughout the interim reclamation areas. Revegetation is progressing, although, additional seeding will be needed to control weed infestation. See below.
Corrective Action	Control weeds at the appropriate time, and no later than 11/1/2020. Per CSU extension, control of Russian knapweeds requires a multi-pronged treatment approach as a single control strategy will not likely be sufficient. Areas treated for Russian knapweed should be reseeded with desirable perennial grasses in the fall to compete with the treated knapweed.
