CORRECTIVE ACTIONS:

5 CA# 140006

Corrective Action: Control and contain spills/releases and clean up per Rule 906.a. Date: 07/26/2020

Response: CA COMPLETED Date of Completion: 07/08/2020

Operator Comment: After tank is reset, both tank and well head will be set up with a float switch. If tank levels rise above 90% the well head will be shut in and no fluid will be allowed to dump to the tank. Tank will have to be offloaded at that point to resume normal operations.

BMPS for well head work will be in place for any workover rigs. Rig mats and buckets for any releases will be place around well head to catch future releases from well head maintance. If fluids reach the soil, a spill report will be submitted.

**6** CA# 140007

Corrective Action: Collect soil sample from area underlying PBV loadout and analyze per Rule 910.b. (3).D. Operator shall incorporate this analysis into the F27 required for assessment of Spill/Release ID #476598.

Date: 06/30/2020

Response: CA COMPLETED

Date of Completion: 07/08/2020

Operator Comment: Loadout line is now dismantled and within secondary containment. Spill prevention during loadout from trucking will consist of buckets to catch any drips from offloading/loading procedures. After completion of loadout, the line will be always stored on top of PBV loadout to prevent any further chances of release.
