Photo 1. View of the BP well from the western edge facing center.

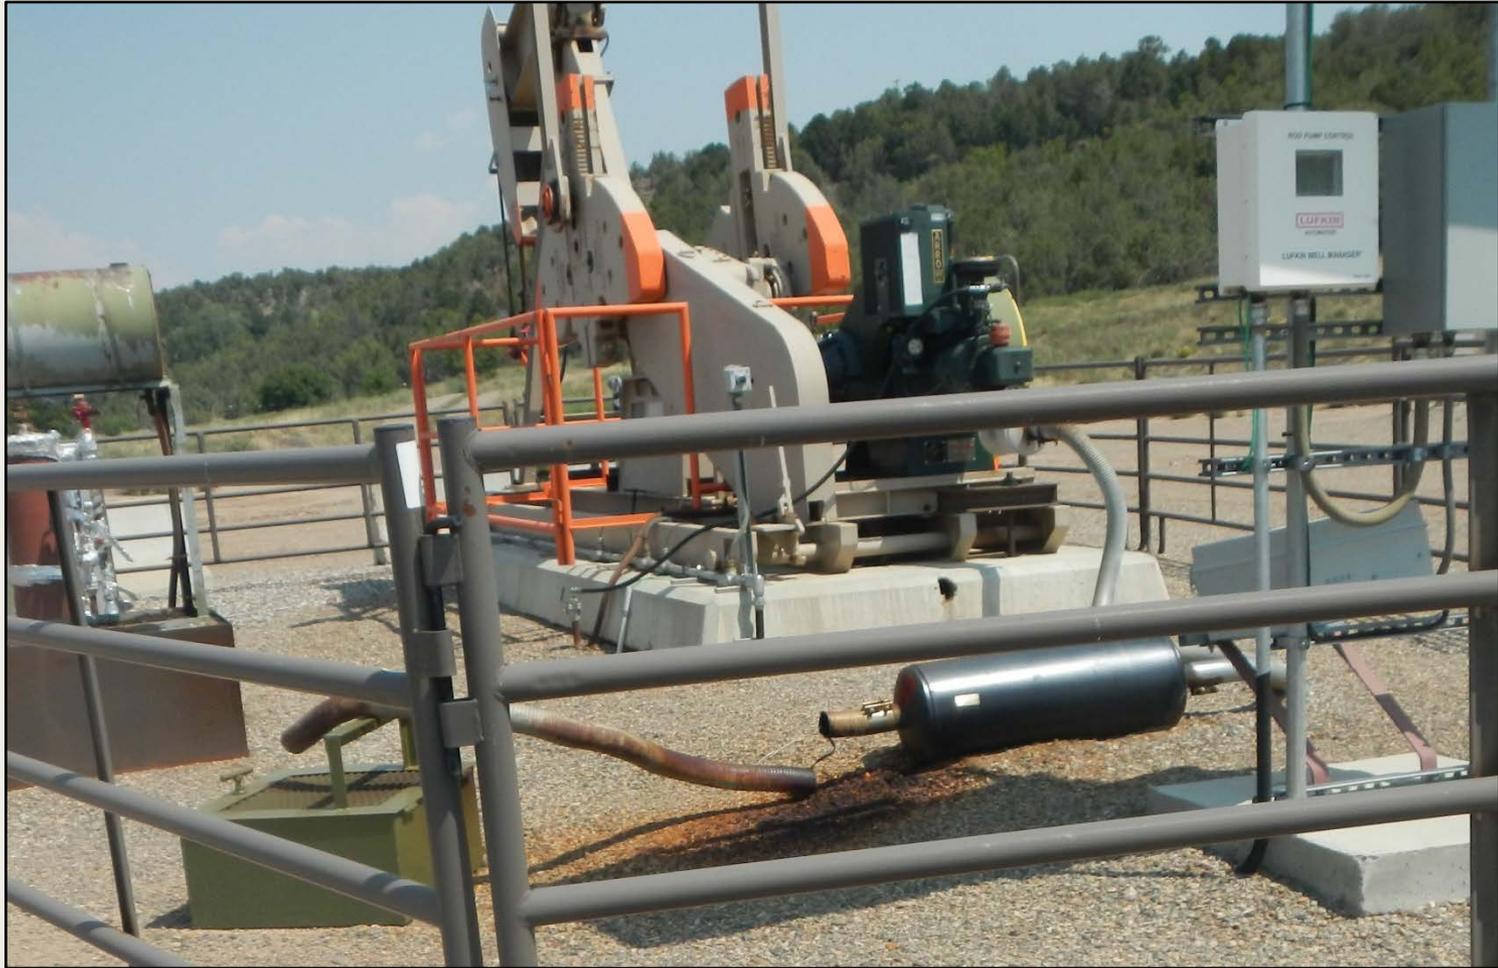

Photo 2. View of stained soils near the well head, approximately 4 feet long and 2.5 feet wide.

Photo 3. View of the western project area from the southwestern corner facing northward. Revegetation is comprised of a mix of shrubs such as fourwing saltbush, rubber rabbitbrush and grasses such as western wheatgrass, as well as weeds such as field bindweed, kochia, and Russian knapweed.

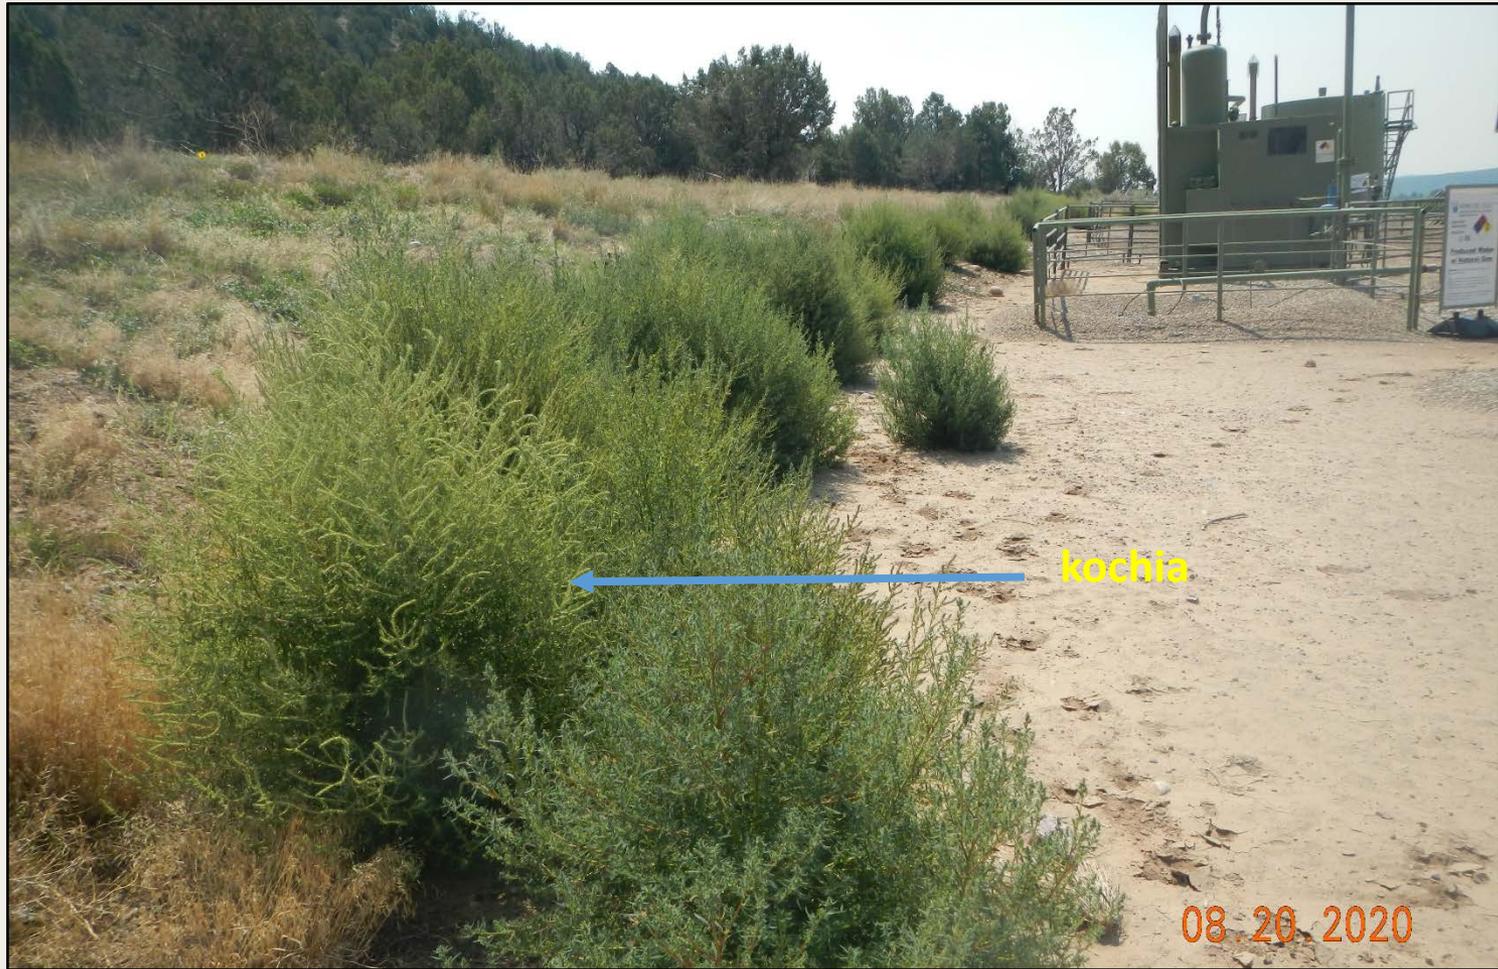

Photo 4. View of the eastern project area from the northeastern corner facing southward. Dense kochia weeds growing within the project area, up to 5-feet tall, will dry, break of, and become tumbleweed debris.

Photo 5. View of Russian knapweeds growing within the southeastern project area.

Photo 6. View of reference area comprised of pinyon/juniper woodland vegetation with understory of shrubs and grasses/forbs such as antelope bitterbrush, mountain mahogany, Indian ricegrass and *Heterotheca villosa*.
