OPERATOR COMMENTS AND SUBMITTAL

Comments

Nearest permitted or completed well in same formation: FEDERAL NR 441-3 (DOC #402484547)

TEP is requesting an exception to Rule 603.a.(2) since it is not feasible for this well's SHL, located on Federal surface, to be located less than 150 ft. from a surface property line owned by the Clough Sheep Company, LLC (Clough). TEP is planning to expand the existing Clough NR 23-3 pad, which is located on Clough surface, and take advantage of existing infrastructure and pipelines to lessen impacts caused by constructing a separate and larger pad. The expansion of this pad northwest of the existing Clough NR 23-3 pad on to Federal surface is the best option given the topographical constraints and preference of the surface owners. An exception letter addressed to the Director and a signed recorded SUA with a waiver from the offset Surface Owner is attached.

Description

1	Drilling/Completion Operations	Alternative Logging Program: The Clough NR 422-3 (API #05-045-20525) one of the first wells drilled on this pad was logged with an open-hole resistivity log with gamma-ray, from TD into the surface casing. All wells on the pad will have a cement bond log (CBL) with gamma-ray run on production casing (or on intermediate casing if production liner is run) into the surface casing. The Form 5, Completion Report, for each well on the pad will list all logs run and have those logs attached. The Form 5 for a well without open-hole logs will state "Alternative Logging Program - No open-hole logs were run" and will clearly identify the type of log and the well (by API#) in which open-hole logs were run.
