COMMENTS:

On 10/7/2020, a Form 17 was completed with a beginning pressure of 87 psi. Gas was present at the beginning of the test. Gas was not continuous and blew down to 0 psi. There was no flow at the end of the test and a gas sample was collected. The sample will be submitted once the lab analysis has been completed. Due to the initial pressure being high, Noble will install automation, monitor and blow down as needed for a period of 6 months, ending 4/7/2021. No mitigation measures have occurred to date, the blow downs will begin after email communication with the COGCC engineer.

COA Type	Description
	Shut in bradenhead pressure shall not exceed 50 psig.
	<p>1. Operator will implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare.</p> <p>2. Prior to starting bradenhead mitigation, if a sample has not been collected within the last twelve months collect bradenhead and production gas samples for laboratory analysis. Sampling will comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results will be provided to the COGCC within three months of collecting the samples.</p> <p>3. Operator will implement measures to get an initial estimate of the gas flow rate and/or volume from the bradenhead. During the shut-in period record pressure data to adequately characterize the build-up.</p> <p>4. By 4/7/2020, conduct a new bradenhead test and submit the Form 17 within ten days of the test and submit a Form 4 Sundry that summarizes current well condition. The sundry should include details of the future plans, sample analysis interpretation, and the flow rate information and pressure data.</p>
