General Comment:

This is a followup inspection for 693902076 conducted on July 28, 2020. Corrective actions are partially addressed. During this inspection the following compliance issues were observed:

-Additional stabilization is needed to stabilize disturbed soils and in the channel near the entrance to the former well pad, by 12/6/2020. This is a highly erosive area and permanent stormwater controls and erosion controls (seeding and mulching) need to be selected, sized, installed and maintained until long-term stabilization is achieved.

-Weeds need to be controlled no later than 6/1/2021.

See below, and attached photos for additional detail.

Comment: Musk thistles observed during previous inspections are removed. Canada thistles are partially treated, but many surviving individuals are present.

Corrective Action: Control weeds at the appropriate time and no later than 6/1/2021. Date _____

Overall Final Reclamation

Well Release on Active Location ☐

Multi-Well Location ☐

Storm Water:

Loc Erosion BMPs	BMP Maintenance	Lease Road Erosion BMPs	Lease BMP Maintenance	Chemical BMPs	Chemical BMP Maintenance	Comment

Comment: Stormwater work conducted near the former well pad entrance does not appear to be adequate. Bare soils from the disturbance needs stabilization. Additional permanent stormwater controls are likely needed due to the highly erosive nature of the area.

Corrective Action: -Additional stabilization is needed to stabilize disturbed soils and in the channel near the entrance to the former well pad, by 12/6/2020. This is a highly erosive area and permanent stormwater controls and erosion controls (seeding and mulching) need to be selected, sized, installed and maintained until long-term stabilization is achieved. Monitoring needs to be conducted.

Date: 12/06/2020

**Care needs to be taken to avoid damaging and compacting vegetation when accessing location. Previous work resulted in vehicle tracking that could require additional reclamation.

Pits: ☒ NO SURFACE INDICATION OF PIT
