CORRECTIVE ACTIONS:

1 ☒ CA# 142363

Corrective Action:

Date: 10/05/2020

Comply with the lighting requirements in Rule 803 and take actions to control fugitive dust per Rule 805.c.

Response: CA COMPLETED

Date of Completion: 09/04/2020

Operator Comment: From the start of well stimulation frac sand was contained in a closed system to eliminate dust lights were located below the top of the sound walls and were directed downward to the operation area.

COGCC Decision: Approved

COGCC Representative: There was still visible dust from the frac sand area and some frac pumps has visible black smoke by inspector and complainants. Some of the lights were not pointed downward adding to the visible dust and these were pointed out at a safety meeting. Inspector was not allowed to go to that area of the frac to take photos. Operator thought that if lights are below the wall that they should pose no issues. Inspector went to the operator's next frac and no dust was observed.

2 ☒ CA# 142364

Corrective Action: 341. BRADENHEAD MONITORING DURING WELL STIMULATION OPERATIONS  
During stimulation operations, bradenhead annulus pressure shall be continuously monitored and recorded on all wells being stimulated.

Date: 10/05/2020

This includes monitoring during fracs at the appropriate transducer scale for the bradenhead pressures, no zeroing of bradenhead readings between stages, and preferably monitoring the bradenhead pressures on the frac screen chart so that a pressure change can be detected immediately.

Response: CA COMPLETED

Date of Completion: 09/04/2020

Operator Comment: Bradenhead pressures have been monitored continuously prior to and during well stimulation during, and continue to be monitored. See attached data.

COGCC Decision: Approved

COGCC Representative: Operator needs to use the right sized transducer cable during fracs.
