## DESCRIPTION OF IMPACT

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	GROUNDWATER	water is being vac trucked daily	vac trucks and booms
Yes	SOILS	still determining	excavation and removal

## INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Removed both points of failed flowline, pressure tested the liner (shown to have good integrity), and have dug out each area. The flowlines will be seamed to new flowlines and pressure tested. The East Dig site is currently believed to be clean and is ready for sampling. The West side is continuing to be monitored and cleaned as needed. Booms are in place within the dug out area, as well as by the creek to prevent any contamination of creek water.

# REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No \_\_\_\_\_

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Impacted soil removal was conducted by Bayswater Exploration and Production (Bayswater) in October 2017. Due to the two release points along the flowline, two excavation areas were present and designated with the identification of "West Dig Site" and "East Dig Site". Confirmation soil samples were collected from the final excavation extent.

## REMEDIATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Monitored natural attenuation (MNA) was selected as the remediation strategy for this site during the first quarter 2018. Enhanced fluid recovery (EFR) and air sparge (AS) were initiated during the second quarter 2018 and continued through the fourth quarter 2020. Based on the fourth quarter 2020 groundwater analytical results, MNA will be the selected remediation strategy for the first quarter 2021.

## GROUNDWATER MONITORING

If groundwater has been impacted, describe proposed monitoring plan, including # of wells or sample points, monitoring schedule, analytical methods, points of compliance. Attach a groundwater monitoring location diagram.

On April 4, 2018, three monitoring wells (MW13 – MW15) were installed via direct-push drilling to delineate dissolved-phase hydrocarbon impact and provide up-gradient points of compliance. In addition, three remediation wells (EFR01 – EFR03) were installed on April 4, 2018 in the vicinity of monitoring well MW01 for remediation purposes. Quarterly groundwater monitoring will continue at the 17 site monitoring wells (MW13 - MW29) until four consecutive quarters of BTEX concentrations below regulatory standards are achieved.
