General Comment:

COGCC engineering integrity inspection performed on January 21st, 2021 in response to initial form 19 spill report Doc #402579101 received on 01/20/2021 that outlines: Small surface staining observed by KPK along the Longmont Farms Unit #5 flowline. Associated well was immediately shut in. Further investigation is necessary to determine root cause of release and quantify volume of fluids released.

Corrective Actions identified during this field inspection are outlined in the flowline section of report. Photos uploaded.

Comment: COGCC Integrity Inspection performed on 1/21/2021; No KPK personnel were on location at time of field inspection. The Longmont Farms Unit #5 well was observed shut in at wellhead (No OOSLAT/ tagout). The area of the off location flowline release has been marked (staked/ flagged); initial spill response completed (surface area grubbed). Excavation work to expose the failed flowline has not been initiated; remediation work and flowline repairs are pending.

Corrective Action: Provide information requested below to COGCC Integrity Inspector (via email) and add to Corrective Actions section of COGCC supplemental form 19 spill report (pertaining to compliance of COGCC series 1100 flowline regulations):
 1) Outline root cause of failure resulting in spill (1104.k. Integrity Failure Investigation/ operator determination)
 2) Measures taken to prevent a recurrence of failure (1102.I Corrosion Control)
 3) Description of flowline repair/replacement work completed (1102.j. Repair)
 4) Perform flowline pressure testing to verify integrity of repairs/ reconections completed prior to returning the Longmont Farms Unit 5 OLF to service (1102.j.4 and 1102.O). Contact COGCC Integrity Inspector with schedule of repair work and followup pressure testing. Upload flowline pressure testing chart/ data to COGCC Form 19 subsequent.
 5) Ensure OOSLAT (valves tagged out) in place to prevent unintentional release per 1102.j.7 (prior to and during time of repair).
