This form has been prepared to support removal of the production equipment associated with this location. In accordance with COGCC Rule 911 and Rule 915 soil samples, and groundwater samples if present, will be collected during closure of each qualifying equipment type. Identified impacts will be reported as required for each discovery, and a Form 19 will be submitted, and remedial investigation will be conducted with excavation equipment.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

In accordance with COGCC Rule 911 and Rule 915 soil samples, and groundwater samples if present, will be collected during closure of each qualifying equipment type and field screened. If suspected impacts are identified, they will be submitted for laboratory analysis of Table 915-1 constituents. If no suspected impacts are identified, field-screening results may be reported in lieu of laboratory analysis. If a release is confirmed through laboratory analysis, additional excavation effort may be conducted to delineate horizontal and vertical extents. Discrete soil samples will be collected and analyzed for Table 915-1 constituents pursuant to Rule 915.e. Overburden stockpiles, if present, will be sampled prior to use as backfill with a frequency of 1 composite sample per 500 cubic yards of material and submitted for analysis of VOCs.

### OPERATOR COMMENT

In addition to the sampling described in the approved Form 27 Initial (Document Number: 402583921), Crestone Peak Resources will investigate the earthen pit located at 40.126496, -104.826165, shown in the attached figure. One boring will be advanced via hand auger to a minimum depth of four feet below ground surface. Field screening will be conducted using a Photoionization Detector and through the presence of visual/olfactory evidence. If impacts are suspected via field screening, the soil boring will be advanced further to determine the vertical extent. If no suspected impacts are identified, one sample will be collected at depth and submitted for laboratory analysis of Table 915-1 constituents. If a release is confirmed through laboratory analysis, additional excavation effort may be conducted to delineate horizontal and vertical extents. Sampling of the earthen pit is planned for February 12, 2021.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
