Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

During routine inspections, DCP personnel observed distressed vegetation at the project location. On June 9, 2021, DCP initiated site investigation activities with a third-party environmental consultant using direct push drilling equipment with continuous core sampling methods. At the time of this report, DCP is waiting on finalized laboratory data for the full Table 915-1 analytes which will be reported in a Form 19-S. However, during the drilling investigation, impacted soil appears to be present based on photoionization detection concentrations. Additionally, saturated soils were encountered at approximately 19 feet below ground surface and elevated PID readings were observed at those depths. Groundwater monitoring wells were installed and DCP plans to develop, survey, and sample those locations as soon as possible. The soil boring and monitoring well construction logs will be provided in the Form 19-S.
