**General Comment:**

On 6/14/21 COGCC staff, Kris Neidel inspected the Dry Creek Unit well, pit 117422 is being closed as a part of REM project 15107 . Weather was 85 degrees and dry. Wildlife was present on location, deer bedded down in tank battery, elk seen adjacent to pad. The well was Shut In at the time of inspection. A pile of stored equipment was on location. There was a small pile, (~1'x1'x1') of apparently contaminated soil that looked to have been placed in the pit. The pile was moved (to side of pit bottom) and sample collected under where pile had sat. Two samples were collected from the pit bottom at approximately 6-10 inches. Corrective Actions: This pile should be removed from location and disposed of as E&P waste per COGCC Rule 905. On the next quarterly report the pit sample results should be provided via Form 27. Remove contaminated soil from wellhead and prevent future releases. See attached photos.
