Photo 1. View the project area from the southern portion of the former well pad facing northward.

Photo 2. View of revegetation within the project area, comprised of crested wheatgrass, western wheatgrass, and smooth brome. Dense Russian thistle debris within the project area appears to be suppressing desirable vegetation cover. Vegetation cannot be assessed properly without removal and management of weed debris.

Photo 3. View of musk thistles within the project area, in a flowering vegetative condition. Approximately 150 individuals observed.

Photo 4. View the reference area comprised of sagebrush shrubland and pinyon/juniper woodland with understory of squirreltail, purple threeawn, Indian ricegrass, and threadleaf sunflower.
