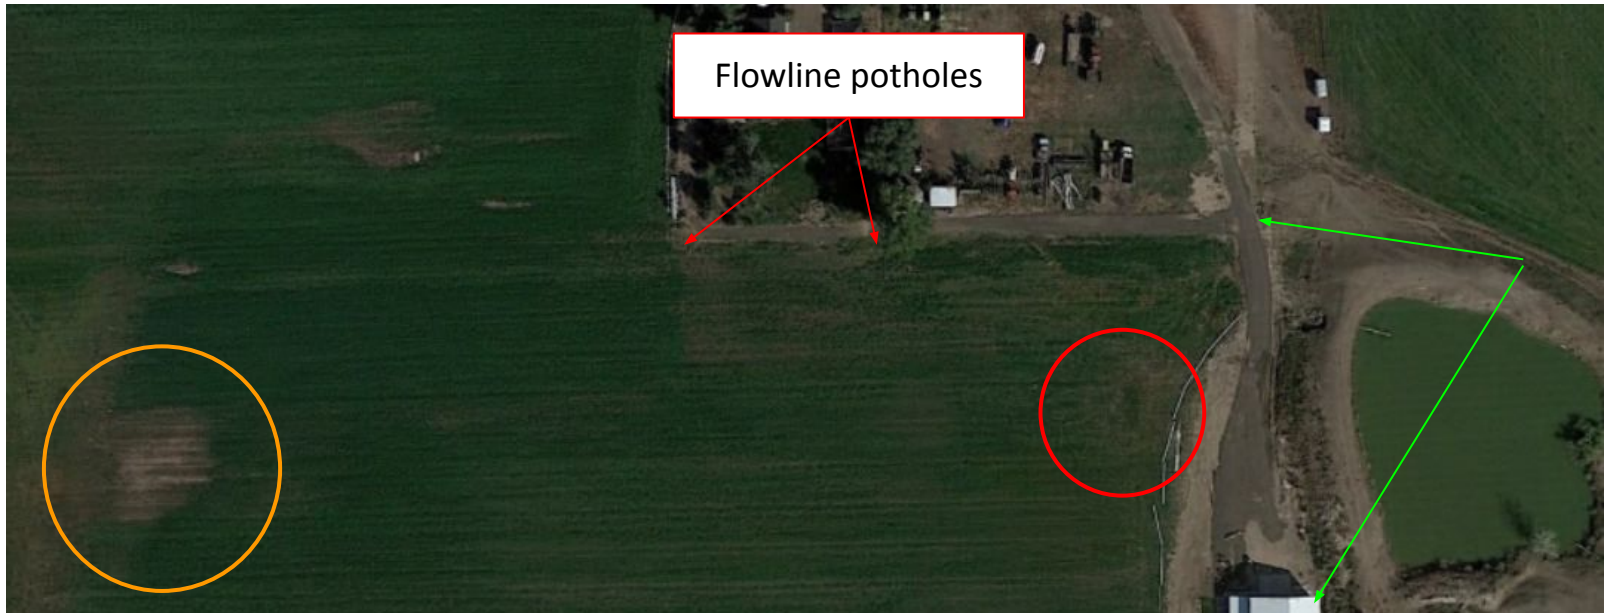

Photo 1. Google Earth aerial imagery taken 9/29/2020. Photo illustrates the well location (red circle) and western impacted area (orange circle). There is subsidence observed at the well location. The surface owner stated the subsidence is impacting flood irrigation and not getting irrigation water all the way to the west.

There were approximately 3, maybe more, potholes that have also subsided within the crop field where agricultural equipment is used.

Note- a final reclamation variance was granted for a portion of the western access road, access road southeast of property owner's house that goes to the former tank battery, and the tank battery.
