#### COMMENTS:

The sundry approved 9/28/2020 for a bradenhead gas combustion strategy (DOC#: 402497744) stated an approximate start date of 10/19/2020. At the end of the approved period the bradenhead combustion device (MESSCO Unit) was disconnected from the bradenhead and the bradenhead was shut-in so a bradenhead test (Form 17) could be conducted. The bradenhead test dated 8/31/2021 showed that after disconnecting the combustion device the bradenhead built to 57 psi. Flow rate data was collected during the mitigation process and showed a max flowrate of 13.131 MSCF/D a volume was unable to be collected due to the bradenhead producing fluid. Additionally, a bradenhead and production gas sample were taken for comparison. Analysis shows that the bradenhead gas sample is thermogenic in origin. When compared to the production gas sample taken the bradenhead gas sample is not as thermal mature.

To comply with the operator guidance Extraction requests to continue routing the bradenhead gas to a catadyne heater within 20' of the wellhead.

Based on the information provided herein, this Sundry Notice (Form 4) complies with COGCC Rules and applicable orders and is hereby approved.

COGCC Approved: Jacobson, Eric Date: 9/27/2021

**CONDITIONS OF APPROVAL, IF ANY:****Condition of Approval****COA Type****Description**

	1. Operator shall implement measures to control venting, to protect health and safety, and to ensure that vapors and odors from well operations do not constitute a nuisance or hazard to public welfare. 2. Bradenhead gas is not to be vented to the atmosphere; any gas from the Bradenhead will be routed to a catadyne heater. Shut in bradenhead pressure shall not exceed 50 psig. Operator shall implement measures to get an estimate of the gas flow rate and/or volume from the bradenhead. 3. Within thirty days of 9/15/2022, submit a Form 4 Sundry that summarizes current well condition. The sundry should include details of the future plans, sample analysis interpretation, bradenhead test description, and the flow rate information and pressure data. 4. Shut well in for at least seven days to monitor build up pressures then conduct a new bradenhead test and submit the Form 17 within ten days of the test. 5. If a sample has not been collected from surface casing within the last twelve months collect bradenhead gas samples for laboratory analysis. Sampling shall comply with Operator Guidance - Bradenhead Testing and Reporting Instructions, Appendix A: Liquid and Gas Sampling. Copies of all final laboratory analytical results shall be provided to the COGCC within three months of collecting the samples.
