☐ **DIGITAL WELL LOG UPLOAD**

☐ **DOCUMENTS SUBMITTED** Purpose of Submission: _____

RECLAMATION**INTERIM RECLAMATION**

☐ Interim Reclamation will commence approximately _____

Per Rule 1003.e.(3) operator shall submit Sundry Notice reporting interim reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Interim reclamation complete, site ready for inspection.

Per Rule 1003.e(3) describe interim reclamation procedure in Comments below or provide as an attachment and attach required location photographs.

Field inspection will be conducted to document Rule 1003.e. compliance

FINAL RECLAMATION

☐ Final Reclamation will commence approximately _____

Per Rule 1004.c.(4) operator shall submit Sundry Notice reporting final reclamation is complete and site is ready for inspection when vegetation reaches 80% coverage.

☐ Final reclamation complete, site ready for inspection. Per Rule 1004.c(4) describe final reclamation procedure in Comments below or provide as an attachment.

Field inspection will be conducted to document Rule 1004.c. compliance

COMMENTS:

TEP Rocky Mountain LLC (TEP) is reporting the bradenhead on the RMV 21-28 well has been connected to the sales separator as part of a Pressure Management Plan. On 7/6/2021, the RMV 21-28 well had a bradenhead pressure of 139 psi. This well has a surface casing depth (TVD) of 336' giving the well a calculated threshold pressure of 101 psi. TEP performed a blowdown test and submitted the test results via a Form 17 on 7/7/2021. A copy of the Form 17 is included in the "Related Forms" section. TEP continued to monitor the bradenhead pressure after performing the test and determined that the bradenhead pressure continued to build and sustain pressures above the calculated threshold pressure. On 9/29/2021, TEP connected the bradenhead to the sales separator as part of a Pressure Management Plan for this well. There are currently no other wells on the pad tied into the separator. This separator will be used for bradenhead gas and gas from the tubing on this well only. The average sales line pressure for this well is 55 psi. The bradenhead was connected to the sales line at the wellhead with steel pipe and a check valve. A typical diagram is attached which depicts the bradenhead connection.
