## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Oil ring present on perimeter of pw pit product of faulty separation at location. Separation process has been serviced/repared. Oil ring has remained in place since discovery. PW sent to pit continually rehydrates oil product during normal production activities.

Impacted soils around pump shed identified in FIR (Doc #688000547). "New Spill" will be investigated to determine root cause of release and remediation of impacted soil from E&P waste will be conducted.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

PW water pit extent of impact is unknown at this time. Excavation area to remove impacted soil and sample locations are also unknown. Grab samples will be collected and analyzed for Table 915-1 analytes. Proposed soil sample locations in area of oil ring observation have been attached.

New SPill extent of impact is unknown at this time. Excavation area to remove impacted soil and sample locations are also unknown. Grab samples will be collected and analyzed for Table 915-1 analytes. Proposed soil sample locations in area of the New Spill have been attached.

## **SOURCE REMOVAL SUMMARY**

Describe how source is to be removed.

Hydrocarbon impacted soil will be excavated and disposed of at a certified disposal facility.

## **REMEDICATION SUMMARY**

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Excavation will be conducted at produced water pit and at area around pump shed ("New Spill") to removed impacted soils. Impacted soil will be excavated and disposed of at a certified disposal facility. Soil samples will be collected from the excavation area to determine the vertical and horizontal extent of impact. Excavation will conclude when soil samples meet Table 915-1 concentration levels.
