Site Investigation and Remediation Workplan (Initial Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Four background soil samples were collected in each cardinal direction off the original pad disturbance in undisturbed, non-impacted native soil for the purposed of establishing background soil conditions per Colorado Oil and Gas Conservation Commission (COGCC) Rule.(2).D. Please see the attached document which details the background soil sampling locations.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) 1

Volume of liquid waste (barrels) 1

☒ Is further site investigation required?

The attached ROWC details initial release characterization. See the Site Investigation Plan section of this form for the proposed investigation activities.

REMEDIAL ACTION PLAN

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The source is a dumphine which will be replaced.

REMEDIAL ACTION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

A remediation plan will be submitted once the impacts are delineated.

RECLAMATION PLAN

RECLAMATION PLANNING

Describe reclamation plan. Discuss existing and new grade recontouring; method and testing of compaction alleviation; and reseeding program, including location of new seed, seed mix and noxious weed prevention. Attach diagram or drawing.

Any disturbance will be returned to the active working surface of the well pad for continued operation. When the site is decommissioned at a later date, it will be reclaimed in accordance with 1000 Series regulations.

Is the described reclamation complete? _____

Does the reclamation described herein constitute interim or final reclamation of the Oil and Gas Location?

☐ Interim ☐ Final

Did the Surface Owner provide the seed mix? _____

If YES, does the seed mix comply with local soil conservation district recommendations? _____

Did the local soil conservation district provide the seed mix? _____

OPERATOR COMMENT

This form is to serve as 4th Quarter 2021 update which details spill characterization results to date. Please see the attached ROWC for project background and summary of initial investigative activities completed. Once approved Caerus will schedule to complete the delineation phase of this investigation. All additional findings will be submitted in a supplemental Form 27.

Proposed Soil Sampling Plan:

Caerus plans to conduct delineation assessment activities to define identified hydrocarbon impacts beneath the point of release (POR) location. These activities will include using a hydro-vacuum truck in an attempt to delineate all remaining hydrocarbon impacts both vertically and laterally beneath the POR location. Once impact extents are determined through soil screening techniques [visual, olfactory observations, and field screening soil samples for volatile organic compounds using a photoionization detector (PID)] soil samples will be collected to confirm. Caerus requests a reduced analyte suite for all future samples collected as part of this project based on analytical results of the sample collected at the POR. This suite would consist of only the analytes (barium, chromium (VI), TPH, benzene, toluene, ethylbenzene, total xylenes, 1,2,4-trimethylbenzene, 1,3,5-trimethylbenzene, naphthalene, SAR and pH) that soil sample 20211005-H7(POR)@7.5' exhibited exceedances for.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.
