This email is to confirm verbal approval to proceed with the reentry and plugging and abandonment of the 123-05582-00 COLORADO NATIONAL BANK 1 well as submitted in Doc #402824175 and subject to the following COA.

Plugging

- 1) Provide 48 hour notice of plugging MIRU via electronic Form 42.
- 2) Contact COGCC Area Inspector prior to commencing plugging operations.
- 3) Plugs and squeezes will be placed as stated in the Plugging Procedure section of the approved NOIA unless revised by COA or prior approval from COGCC is obtained.
- 4) The wellbore must be static prior to placing cement plugs which are to be a minimum of 100' in length for all but surface plugs. Mechanical isolation requires a 25' cement plug, minimum. For plugs not specified to be tagged, a tag is required if circulation is not maintained while pumping plug and displacing to depth. Tag at tops specified or shallower. Notify COGCC Area Engineer before adding cement to previous plug.
- 5) Place a 50' plug (minimum) at the surface, both inside the inner most casing and in all annular spaces. Surface plugs shall be circulated to surface. Confirm cement to surface in all strings during cut and cap.
- 6) With the Form 6 SRA operator must provide written documentation which positively affirms each COA has been addressed.

Steve

Hi,

We are having network issues but I can get email. Please send me a copy of the 6(N) pdf and I can reply to that.

thanks,

steve

Good Afternoon,

We have a PA remediation that took a long time to get the FS surface permit. It has made the form 6 for the Colorado National Bank #1 well (document 402824175) an urgent priority.

It looks like Shanelle has signed off. It would be greatly appreciated if you were able to prioritize this for review and approval.

Please let me know If you have any questions or concerns on this one.

Thanks so much,

Heather Mitchell
