Spills/Releases:

Type of Spill: CONDENSATE

Estimated Spill Volume: 5

Comment: See Spill/Release ID 481420 for more information. 1/11/2022 COGCC staff observed an excavation that was located adjacent to the tank battery on location. This excavation contained potentially impacted material and groundwater. Within the excavation, there appeared to be a flowline that runs from the wellhead to the tank battery. Stockpiles of potentially impacted material with a detectable hydrocarbon odor were present around the southwest side of the excavation. Two troughs containing potentially impacted material and condensate were observed on a trailer west of the excavation. Condensate was also present in various amounts and locations around the excavation at times of inspection. See Photo Log for details.

Corrective Action: Delineate the horizontal and vertical extent of impacted area and remediate impacts to Table 915-1 Protection of Groundwater Soil Screening Level Concentrations.
