## (DETAILS OF WORK)

J. F. Kirk "A" 5 was completed in June, 1952 pumping 195 barrels oil and no water from Dakota sandstone perforations 4905 (-790) to 4909 (-794) feet. Oil production declined rapidly until November, 1952 when the well was shut in. During December, 1954 the Dakota oil pay was perforated from 4897 (-782) to 4905 (-790) feet to restore the well to a flowing production of 35 barrels oil and 1479 MCF gas per day. The well was shut in due to the high GOR. Water appeared during June, 1956 and thereafter oil and gas production declined rapidly. During February, 1959 the well produced at a rate of 1 barrel oil with 100 barrels of water per day. Based on these experiences, we propose to plug and abandon J. F. Kirk "A" 5.
