COMMENTS:

This well started mitigation in December 2021. The pre-mitigation bradenhead test conducted 12/09/2021 (Form 17 doc# 402896781) reported 60 psi.

After diagnostics were conducted on this well's bradenhead, it was determined that the pressure requires mitigation. Extraction will continue with a mitigation plan that involves four periods of bradenhead blowdowns to a catalytic convertor separated by periods of at least 7 days being shut in. This will allow us to evaluate the profile of any pressure build-ups over a 6-month period of sequential blowdowns and draw conclusions from that data. At the end of the data collection period a follow-up sundry reporting results will be submitted.
