5.

DESCRIBE PROPOSED OR COMPLETED OPERATIONS

XTO proposes to operate a gas gathering system (Apache Canyon) with a central compressor station (Station #1), satellite compressor stations and wellhead compressors to pull approximately 7 psi of vacuum at the wells. Attached is a table of the wells on the Apache Canyon Gathering System and a map showing their locations. The table indicates which wells currently have wellhead compressors. XTO plans to continue installing wellhead compressors on the remaining wells. Oxygen monitors are located at each satellite compressor station. If oxygen levels exceed 10 ppm at the main XTO gas sales meter (downstream from Station #1), gas sales will be shut off until the levels are returned to 10 ppm or less. Oxygen monitors throughout the system will be used to locate the source of the oxygen problem. Actions will be taken to correct the problem
