Environmental**Spills/Releases:**

Type of Spill: _____

Estimated Spill Volume: _____

Comment: See Form 19 Initial Doc #403000387 for more information. 4/5/2022 COGCC staff observed potentially impacted material within the tank battery secondary containment structure (where the spill/release occurred) as well as various locations on the Pinyon Ridge Federal C1-W location. There were multiple area on the exterior of the tank battery secondary containment structure where fluids had escaped the secondary containment structure and migrated across the location. The potentially impacted material had a strong hydrocarbon odor and produced a sheen when in contact with what appeared to be storm water on the location. It appears that the operator used absorbent pad to initially contain and control the release but the potentially impacted absorbent pads where being blown off the location at time of inspection. COGCC staff notified the operator on 4/5/2022 of the potentially impacted absorbent pads being blown off the location. The potential impacts were observed on the eastern and northeastern portions of the location and a residual impact ring was observed on the northern berm of the location. It appears that minimal clean-up and remediation activities have occurred at the location since the spill/release was discovered on 3/27/2022. See phot log for details.

Corrective Action: A Supplemental Form 19 is required within ten days of discovery of the spill/release. See rule 912.b.(4) for the information that is required on the Supplemental report. Corrective Action date is for the required ten day Supplemental Form 19. Control and contain spills/releases and immediately clean up per Rule 912.a.
