## Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

No	SURFACE WATER	None	Visual inspection

### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&amp;P Waste.

A visual inspection has been performed looking for signs of stained soil and potential leeching of pit components that may have impacted groundwater or surface water, none were found. COGCC was given 72 hours' notice prior to pit sampling.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Soil samples were collected in November 2020. 3 samples were obtained for analysis, one from the pit floor, 2 from the sidewalls (one sidewall sample was obtained in the wall opposite the load line's entrance to the pit, as indicated by an old site facility diagram). All 3 samples failed for EC, SAR and arsenic. Sample #1 (pit floor) failed for DRO). Please see the attached analysis, soil notes and GPS information.

#### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

A visual inspection has been performed looking for signs of stained soil and potential leeching of pit components that may have impacted groundwater or surface water, none were found. If groundwater is encountered during remediation, COGCC will be notified immediately.

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

A visual inspection has been performed looking for signs of stained soil and potential leeching of pit components that may have impacted groundwater or surface water, none were found. If groundwater is encountered during remediation, COGCC will be notified immediately.

## REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

## SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

Wexpro Company proposes to remove the contaminated soil from this pit by excavation (most likely trackhoe) and haul to an approved disposal facility, as the last round of sampling does not meet Table 910-1 standards.

## REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Wexpro Company requests approval to delineate the contamination of this pit while excavating soils to be hauled to an approved facility. If possible, a PID meter will be used to periodically gauge whether or not the contamination has been removed during excavation. If no PID is available, Wexpro Company will re-sample the excavated area after it is believed that all contamination has been removed, for confirmation. Wexpro Company will test the excavated area for all Table 910-1 constituents. Soil analysis of the excavated area will be submitted with request for closure before the pit is backfilled. The pit will be fenced until approval to backfill has been received, so as to prevent intrusion from wildlife and livestock. The BLM (surface owner) will be notified of this plan, and excavation will begin, weather permitting, once all agency approvals have been received.
