General Comment:

On May 5, 2022, COGCC Environmental Staff (John Heil) conducted an environmental field inspection of TEP ROCKY MOUNTAIN LLC (TEP operator #96850) 4-inch flex-pipe produced water line associated with Spill/Release ID 482164.

Environmental**Spills/Releases:**Type of Spill: PRODUCED WATEREstimated Spill Volume: 100

Comment: 5/5/2022 COGCC staff conducted a visual inspection of the spill/release area, as well as the adjacent impacted Black Sulfur Creek. An excavation containing the ruptured 4-inch flex-pipe produced water line was observed measuring approximately 25'x10'x6' (LxWxH). The excavation was fenced and contained potentially impacted material as well as potentially impacted fluids. Various sized stockpiles of potentially impacted material were located on the east and west side of the excavation and had a detectable hydrocarbon odor at time of inspection. COGCC staff observed what appeared to be a visible sheen with a detectable hydrocarbon odor on Black Sulfur Creek adjacent to the spill/release area. The same sheen was not observed up-gradient or down-gradient of the spill/release area. Water well Permit #295154 located approximately 1 mile upstream on Black Sulfur Creek reports a static water level of 12.68 feet. See Photo Log for details.

Corrective Action: Operator shall comply with COAs on Form 19 Doc #403039707 and #403048520.
