**Attachments:** insp\_688000641.pdf

Good morning Rob,

Last Tuesday, May 17<sup>th</sup>, Tasman performed soil sampling at the Hill Central Tank Battery on behalf of Foundation Energy in response to your comment on the attached inspection report (688000641). Samples were collected under the skim tank for BTEX, TPH-GRO, and TPH-DRO and from the east wall of the pit for EC and SAR. The CA date on that comment is listed as today (5/27/2022), however, the lab data are not yet available at this time and will likely be available by next Tuesday after the holiday weekend. With your approval, this email will serve as a status update until a Form 27-S can be prepared with laboratory confirmation data next week. Please advise if you would like additional documentation.

The remediation number for this project is #1122.

Thank you,

**Vade Scruggs**

Geologist/Environmental Scientist
