Latitude: 39.677052 Longitude: -108.138400

CORRECTIVE ACTIONS:

2 ☒ CA# 162945

Corrective Action: Comply with Rule 1002.f and implement perimeter stormwater and erosion control BMPs to manage runoff, and to allow for sediment laden-free discharge from the Location; ensure BMPs are installed accordance with good engineering practices, are adequate for the sites conditions, and are maintained in a proper functioning conditions. Ensure stockpiled topsoil is not incorporated with the BMPs, and remain protected.

Date: 09/10/2021

Response: CA COMPLETED

Date of Completion: 08/12/2022

The location, including perimeter stormwater controls, were constructed utilizing industry standard operating

Operator Comment: procedures, best management practices and standards permitted with BLM & COGCC at the time of approval. The stormwater controls measures were engineered to contain and disperse stormwater through infiltration, not surface discharge. Perimeter Sediment Control Logs are in place to mitigate the potential for sediment laden discharge from the location. All stormwater BMPS, as well as Topsoil stock piles, are inspected routinely during scheduled stormwater inspection under CDPHE COR400000 General Construction Stormwater Permit, and we will continue to monitor for degradation, mixing with subsoils and wind and water erosion. Any issues identified during inspection will be repaired per our maintenance program.

COGCC Decision: **Not Approved**

COGCC Representative: Inspections observed topsoil stockpiles in use as part of the Location's perimeter stormwater BMPs (ditch/berm and sediment traps/ponds); this does not comport with COGCC 1002 Rules and Operator has been notified accordingly on multiple occasions; Operator has not provided any documentation that this compliance issue has been resolved.

#### OPERATOR COMMENT AND SUBMITTAL

Comment:

I hereby certify that the statements made in this form are, to the best of my knowledge, true, correct, and complete.
