Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

On January 7, 2022 at 1400 a spill was discovered at the Banito Federal 31-24 location by an employee. Spill originated at the wellhead, due to a broken 2" valve. Spill was immediately isolated by the employee. ENR employees were contacted immediately to assess damage/spill volume. The spill ran west 69 feet, changed direction, flowed 38 feet south, changed direction and flowed 100 feet southeast off location. The spill did not impact waters of the state or high priority habitat. Initial estimations of spill volume are 46 bbls of produced water. 5 bbls of produced water were recovered via water truck. Spill investigation is still ongoing.
