## **DESCRIPTION OF IMPACT**

Impacted?	Impacted Media	Extent of Impact	How Determined
Yes	SOILS	To be determined	Laboratory analysis of soil samples.

## **INITIAL ACTION SUMMARY**

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

On March 27, 2022, an unknown volume of produced water overflowed from a tank and was spilled inside secondary containment. Please reference Form 27 Document 403068552 for initial response and spill characterization details.

On July 25, 2022, 10 soil borings were advanced using a direct push drill rig to continue characterization and delineation of identified impacts to soil. Based on a review of laboratory results and spatial data, Soil Suitability for Reclamation (SSR) constituents and arsenic exceeding COGCC Table 915-1 Residential Soil Screening Levels remain at the Location. Additionally, horizontal and vertical delineation of hydrocarbon impacts, specifically TPH, appears to have been achieved. Assessment activities and results are detailed in the attached Report of Work Completed (ROWC).

## **PROPOSED SAMPLING PLAN**

### **Proposed Soil Sampling**

Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Additional soil sampling is warranted to delineate SAR, pH, and arsenic exceedances within the spill area. Additionally, Anschutz plans to background samples to establish native SAR, pH, and arsenic levels.

### **Proposed Groundwater Sampling**

Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### **Proposed Surface Water Sampling**

Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):
