COMMENTS:

This well started mitigation in September 2019. The bradenhead test conducted 09/26/2019 (Form 17 doc# 402199641) reported 196 psi. In the previous 6 months of bradenhead drawdown mitigation, Extraction has seen progress with this well's pressure but believes that it would benefit from an additional round of drawdown through the fugitive gas destruction device set at the wellhead. Progress can be seen in the pressure trends (charts attached), but the bradenhead test conducted 10/11/2022 (Form 17 doc # 403197407) reporting 90 psi and a total volume of 0.2177 MSCF, flown at an initial rate of 17.11 MCF/D, indicates additional mitigation is needed. Sample results indicate the bradenhead gas is mixed microbial/thermogenic and does not match the production gas. Extraction is confident in the efficacy of the current mitigation program and is requesting that this mitigation plan be extended for an additional 6 months.
