**COMMENTS:**

This well started mitigation in September 2020. The bradenhead test conducted 9/2/2020 (Form 17 doc# 402484697) reported 103 psi. Following the previous period of abatement through the facility, Crestone has effectively kept the bradenhead pressure below the action threshold apart from one period when there was equipment maintenance being done. This can be seen in the pressure trends (charts attached) and the bradenhead test conducted 10/18/2022 (Form 17 doc # 403206870) reporting 39 psi and a total volume of 0.0475 MSCF, flown at an initial rate of 16.43 MCF/D. While there is progress, the buildup trend indicates a climb above the action threshold is likely. Crestone believes the well would benefit from continued pressure abatement. Sample results show the bradenhead gas is thermogenic but not a match for the production gas. Crestone is confident in the efficacy of the bradenhead pressure abatement system and plans to continue with the current strategy. Crestone will conduct the next annual test in 2023 and provide an update on bradenhead abatement at that time.
