Site Investigation and Remediation Workplan (Supplemental Form)

This form shall be submitted to the Director for approval prior to the initiation of site investigation and remediation activities. However, this shall not preclude the Operator from taking immediate action to protect public health or safety, the environment, wildlife, or livestock.

This Form 27 describes site conditions as currently understood by the Operator; approval of this Form 27 by COGCC is based on the site conditions accurately described herein; any changes in site conditions identified during or subsequent to the performance of the approved workplan may necessitate additional investigation or remediation which shall be described on a supplemental Form 27. This Form 27 is intended to provide basic information regarding the proposed site investigation and remediation actions, but the workplan may be more fully described in attached documentation.

Closure request is not available for an Initial Site Investigation and Remediation Workplan.

INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

SEE FORM 19 AS TO WHAT CAUSED THE SPILL AND ACTIONS TAKEN BY WILLIAMS PERSONNEL

Update: 10/25/2022 - As outlined within the Form 19, contractor personnel failed to properly close the valve to the produced water tank. Upon discovery, responding personnel closed the valve and disconnected the rubber loadout hose.

Based on historical photos, a backhoe was used to remove the impacted soils that flowed down the access road and hauled offsite for subsequent management.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

Due to the timeframe of when this release occurred and record retention policies for both laboratory facilities and subcontractor personnel, historical data reports could not be obtained. Historical photos would be used to conduct new sampling from within the area of impact and analyzed for COGCC Table 915-1.

Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

If surface water is impacted, other agency notification may be required.

OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

Three background samples collected from the nearby undisturbed areas have been submitted for inorganic and arsenic.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards) _____ Volume of liquid waste (barrels) _____

☐ Is further site investigation required?

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? Yes

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

IMPACTED SOIL ON THE ACCESS ROAD WILL BE REMEDIATED. IMPACTED SOIL IN THE EPHEMERAL DRAINAGE IS INACCESSIBLE. HOWEVER, SAMPLES HAVE BEEN COLLECTED TO DETERMINE THE HYDROCARBON IMPACTS, IF ANY.

REMEDICATION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Update: 10/25/2022 - Based on historical photos, a backhoe was used to remove the impacted soils that flowed down the access road and hauled offsite for subsequent management. Due to the timeframe of when this release occurred, limited information is available.

OPERATOR COMMENT

Please forward onto John Heil

In response to NOAV Doc# 403003375, this Supplemental Form 27 is being submitted to provide closure documentation for the PA 13-27 release that occurred in March 2007 and issued REM# 3904 on the Initial Form 27 (Doc# 2057354). A status update was provided via Supplemental Form 27 (Doc# 403120569) on 7/29/2022, outlining TEP proposed course of actions.

As outlined within the status update Supplemental Form 27 (Doc# 403120569) submitted on 7/29/2022, TEP has completed an evaluation of the incident and the only records that were obtained from subcontractor personnel were photos of the initial release and remediation from an old digital camera memory card. Photos were used to determine the area of impacts and allow TEP personnel to collect a sample from within the area where the release occurred in 2007. It was decided to collect a new sample due the date of the incident extending beyond the laboratory and subcontractor record retention policies, making the original data reports unavailable. Additionally, three background samples have been collected for metal and inorganic comparison.

Confirmation sampling analysis consisted of COGCC Table 915-1 constituents to comply with current regulatory requirements. Samples were collected as shown within the attached sample location map from depths of 0-12" below ground surface. Visual assessment of the area where the release occurred did not indicate any signs of impacts (stressed vegetation, staining, white crusting, hydrocarbon odors, etc.) nor did field screening results suggest a hydrocarbon concentration at or above COGCC thresholds. Results from the confirmation sampling confirmed that soils do not exceed COGCC Table 915-1 thresholds.

TEP is requesting closure of this 2007 historical release and REM# 3904.

I hereby certify all statements made in this form are to the best of my knowledge true, correct, and complete.

Description

	Based on a review of the information provided, it appears that no further action is necessary at this time and COGCC approves the closure request. Should conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards, or, if groundwater is found to be significantly impacted, further investigation and/or remediation activities may be required at the site.
