### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to COGCC Rule 911 a site investigation was conducted pertaining to the ROTH 12-30 wellhead cut and cap and flowline decommissioning. Approximately 90' of flowline was abandoned-in-place due to field constraints. The wellhead was cut and capped per COGCC rules.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Five (5) grab confirmation soil samples were collected at the wellhead excavation. Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per COGCC Table 915-1, EC, SAR, pH, and boron. Based on field observations, all five samples were submitted for waste characterization of COGCC Table 915-1 metals. All samples collected were analyzed by a certified laboratory using approved COGCC laboratory analysis methods.

#### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

### Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

### OTHER INVESTIGATION INFORMATION

☐ Were impacts to adjacent property or offsite impacts identified?

☒ Were background samples collected as part of this site investigation?

A background sample for arsenic, barium, lead, and selenium analysis was collected.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)

Volume of liquid waste (barrels)

☒ Is further site investigation required?

Based on field observations at the time of the initial wellhead assessment, petroleum hydrocarbon odor and elevated organic vapor measurements were observed throughout the excavation. Based on soil analytical results, COGCC Table 915-1 organics and inorganics were in compliance. However, waste characterization of COGCC Table 915-1 metals was completed and found elevated concentrations of arsenic, barium, lead, and selenium exceeding local clean-up level and/or COGCC Table 915-1 protection of groundwater soil screening levels (GSSLs). A site assessment will be scheduled to delineate impacted media observed at the wellhead and determine the applicability of GSSLs. Noble proposes soil samples will be collected for analysis of arsenic, barium, lead, and selenium. Additional background samples for arsenic, barium, lead, and selenium are proposed to further compare residual metals at the site. If groundwater is encountered each soil boring will be completed as a monitoring well and the groundwater will be sampled for BTEX, naphthalene, 1,2,4-trimethylbenzene, and 1,3,5-trimethylbenzene.

### REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

#### SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

No source is currently generated. A site assessment will be scheduled prior to December 31, 2022 to delineate impacted media observed at the wellhead and determine the applicability of GSSLs. Noble proposes soil samples will be collected for analysis of arsenic, barium, lead, and selenium. Additional background samples for arsenic, barium, lead, and selenium are proposed to further compare residual metals at the site.

#### REMEDIAL SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

A site assessment will be completed by December 31, 2022 to delineate impacted media observed at the wellhead and determine the applicability of GSSLs. The results of the assessment will be provided on a supplemental 27 and a remediation plan will be proposed as applicable. A NFA status will be considered when soil and/or groundwater is in compliance with applicable COGCC Table 915-1 regulatory limits and/or local clean-up considerations. A timeline for NFA will be proposed in a supplemental 27 following review of the site investigation data.
