Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

A flowline located in/adjacent to existing tank battery froze and released approximately 10-15 bbls of produced water/oil onto existing lease and lease road.  
The release was stopped shortly after it occurred. All existing, assumed impacted soils will be segregated onsite via excavation for disposal to county landfill because of relatively low chloride levels at location. The assumption of disposal method will be confirmed with prior analytical. All excavated areas will be refilled with new soils and gravels from an exterior location.
