INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

Pursuant to COGCC Rule 911 a site investigation will be conducted pertaining to the LILLI UNIT 06-09 wellhead cut and cap and flowline abandonment. Approximately 1950' of flowline was abandoned-in-place and documented on Form 44 number 403078130. The wellhead was cut and capped per COGCC rules. The Flowline Pre-Abandonment Notice Document number was included under Related Forms.

PROPOSED SAMPLING PLAN

Proposed Soil Sampling

- ☒ Will soil samples be collected as part of this investigation? (Number, type (grab/composite), analyses, and locations of samples):

One (1) grab soil sample was collected at the base of the excavation during field screening activities at the wellhead excavation. Soil samples were analyzed by a certified laboratory for TPH (total volatile [C6-C10] and extractable [C10-C36] hydrocarbons) organic compounds in soil per COGCC Table 915-1, and EC, SAR, pH, and boron. All samples collected were analyzed by a certified laboratory using approved COGCC laboratory analysis methods.

Proposed Groundwater Sampling

- ☒ Will groundwater samples be collected as part of this investigation? (Number, analyses, and locations of samples):

If groundwater is encountered during the site investigation a grab groundwater will be collected and analyzed for all organic compounds per COGCC Table 915-1.

Proposed Surface Water Sampling

- ☐ Will surface water samples be collected as part of this investigation? (Number, analyses, and locations of samples):

Additional Investigative Actions

- ☐ Additional alternative investigative actions described in attached Site Investigation Plan (summary):

Visual inspection of the wellhead area occurred during abandonment activities. Field personnel field screened all disturbed areas using visual and olfactory senses to determine if laboratory confirmation sampling was required. The COGCC Wellhead Closure Checklist was utilized and filled out during the abandonment process. A photolog was submitted on the Subsequent Form 27. Additionally, during site reclamation an area of stained soil was observed on the western side of the former wellhead area. One (1) confirmation soil sample was collected on 9/14/2022 from the area of stained soils, which verified that TPH was present in soil above COGCC Table 915-1 Residential Soil Screening Levels. Following the confirmation of impacts at the site, a Form 19 was submitted to the COGCC, and spill number 482946 was issued for the site. On 9/29/2022, a remedial excavation was conducted to remove soils with hydrocarbon impacts above COGCC Table 915-1 standards.

REMEDIAL ACTION PLAN

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

SOURCE REMOVAL SUMMARY

Describe how source is to be removed.

The source was removed through a remedial excavation. Following the collection and analysis of background samples, Noble will request No Further Action (NFA) for the site.

REMEDIAL ACTION SUMMARY

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

A total of approximately 64 cubic yards of impacted material were removed for off-Site disposal at the Waste Management Landfill in Ault, Colorado undersigned Noble waste manifests. A total of approximately 58 cubic yards of imported clean fill was used to backfill the excavation. The final remedial excavation extent measured approximately 23 ft. by 25 ft. by 3 ft. bgs.
