Hi Steve,

We are currently completing the re-entry P&A on the Huyler 1 (05-123-05173). I believe you and Adam spoke about this well after we discovered the casing had been cut and pulled from an unknown depth. We tagged what we believe to be the top of the 5-1/2" casing at 5665'. With your approval, we will proceed with pumping a 200' (77 sx with 30% excess) plug from 5665' up to 5465' and then come up to 2300' to pump the next plug in the approved Form 6. Please let me know if you have any questions and if we have your approval to proceed with this plan.

Thank you,

Sheldon Mullet
