COMMENTS:

TEP Rocky Mountain LLC (TEP) requests permission to increase the bradenhead threshold pressure on the Union TW 1-32 before proceeding with connecting the bradenhead to the sales line as part of a pressure management plan for this well. This well currently has a calculated bradenhead threshold pressure of 91 psi. TEP is requesting a bradenhead threshold pressure increase to 150 psi which is approximately 30 psi higher than the average sales line pressure. The well has 12 feet of fluid on the backside or a fluid top of 292 feet based on the surface casing depth of 304 feet (TVD). At 150 psi, this equates to an equivalent pressure of 97 psi at the surface casing shoe. This Sundry is a subsequent report to Doc # 403203333 (Form 4) and Doc # 403185052 (Form 17). Upon COGCC approval of the requested bradenhead threshold pressure increase, TEP will proceed with connecting the bradenhead on the Union TW 1-32 to the sales line. This connection, in combination with the requested threshold pressure increase, will allow TEP to effectively manage the bradenhead pressure on the Union TW 1-32.
