### Qualifiers

#### Metals

| Qualifier | Qualifier Description   |
|-----------|---|
| ^6+       | Interference Check Standard (ICSA and/or ICSAB) is outside acceptance limits, high biased.  |
| 4         | MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable. |

#### General Chemistry

| Qualifier | Qualifier Description  |
|-----------|--|
| HF        | Field parameter with a holding time of 15 minutes. Test performed by laboratory at client's request. |

## CASE NARRATIVE

**Client: Evergreen Natural Resources, Inc.**

**Project: 909j Water Sampling**

**Report Number: 280-161505-1**

With the exceptions noted as flags or footnotes, standard analytical protocols were followed in the analysis of the samples and no problems were encountered or anomalies observed. In addition all laboratory quality control samples were within established control limits, with any exceptions noted below. Each sample was analyzed to achieve the lowest possible reporting limit within the constraints of the method. In some cases, due to interference or analytes present at high concentrations, samples were diluted. For diluted samples, the reporting limits are adjusted relative to the dilution required.

This report may include reporting limits (RLs) less than Eurofins TestAmerica's standard reporting limit. The reported sample results and associated reporting limits are being used specifically to meet the needs of this project. Note that data are not normally reported to these levels without qualification because they are inherently less reliable and potentially less defensible than required by the latest industry standards.

### Receipt

The samples were received on 4/26/2022. Unless otherwise noted below, the samples arrived in good condition, and, where required, properly preserved and on ice. The temperatures of the coolers at receipt time were 1.9°C and 2.0°C.

### GC/MS Volatiles, 8260B

The method 8260B MS/MSD could not be performed, due to insufficient sample volume. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

No anomalies were observed.

### GC Volatiles, 8015C

The method 8015C MS/MSD could not be performed, due to insufficient sample volume. Method precision and accuracy have been verified by the acceptable LCS/LCSD analysis data.

Method 8015C\_GRO: The following samples were collected in a properly preserved vial; however, the pH was 3 and outside the required criteria when verified by the laboratory. The samples were analyzed within the 7-day holding time specified for unpreserved samples: 257869YTR (Dover 21-1 TR) (280-161505-1) and 268202Y (Cordova 23-19 H TR) (280-161505-3).

No anomalies were observed.

### GC Semi Volatiles, 8015C

The method 8015C MS/MSD could not be performed, due to insufficient sample volume. Samples were analyzed without LCSD or MS/MSD pair but were reported .257869YTR (Dover 21-1 TR) (280-161505-1), 257869Y (Dover 21-1) (280-161505-2), 268202Y (Cordova 23-19 H TR) (280-161505-3) and 263613Y (Cordova 23-19) (280-161505-4).

Sample 257869Y (Dover 21-1) (280-161505-2) was pale yellow in color.

Sample 263613Y (Cordova 23-19) (280-161505-4) was dark brown in color

Due to the matrix, the initial volume used for the following sample deviated from the standard procedure: 263613Y (Cordova 23-19)

## Case Narrative

### Job ID: 280-161505-1 (Continued)

#### Laboratory: Eurofins Denver (Continued)

(280-161505-4). The reporting limits (RLs) have been adjusted proportionately. .

No other anomalies were observed.

#### Total Metals, MCAWW 200.7, MCAWW 200.8

The accuracy and precision of the Sodium MS/MSD performed on sample from another client and/or lot could not be reliably evaluated, as the concentrations present in the parent sample were 4 times greater than the matrix spike concentration. The acceptable LCS analysis data indicated that the analytical system was operating within control; therefore, corrective action is deemed unnecessary.

The Method 200.8 MS/MSD was performed on sample 257896YtR (Dover 21-1 TR) and was within control limits.

Method 200.7: The interference check standard solution (ICSA) associated with the following samples showed results for strontium (24.3 ppb) at a level greater than 2 times the reporting limit (10 ppb). It is believed that the solution contains trace impurities of this element / these elements and the results are not due to matrix interference. These results are consistent with those found by the manufacturer of the ICSA solution.

#### General Chemistry, Various Methods

The Method 300.0 and 365.1 MS/MSDs and Duplicates were performed on sample 257869YTR (Dover 21-1TR) and was within control limits.

All other MS/MSDs were performed on samples from another client and/or lot and were in control.

All Sample Duplicates were performed on samples from another client and/or lot and were in control.

No other anomalies were observed.
