Describe what is known about the spill/release event (what happened -- including how it was stopped, contained, and recovered):

3rd party pumper notified SOCC of a possible line leak on the PN 30 (2" line). SOCC called on call pipeline operator who went to location and confirmed the leak. Line was blocked in on both sides (approximately 100'). Due to the block and the hole the line naturally blew down. No estimate of amount of product released is currently available and size of hole is undetermined because it is a buried pipeline. Line was blocked in with excavation and repairs to be scheduled.

**COA Type**

**Description**

	Based on review of information presented it appears that no additional spill reporting via the Form 19 is necessary at this time, and COGCC approves the closure request. However, should future conditions at the site indicate contaminant concentrations in soils exceeding COGCC standards or if surface and/or ground water is found to be impacted, then further investigation and/or remediation activities will be required at the site.
