### INITIAL ACTION SUMMARY

Description of initial action or emergency response measures take to abate, investigate, and/or remediate impacts associated with E&P Waste.

The City and County of Denver has plugged the CHAMPLIN 117 AMOCO C 5 well and decommissioned the associated flowlines and production equipment. Initial assessment and sampling occurred on November 01, 2022 and indicated soil impacts above COGCC standards as described in the Site Investigation Report section below. Proposed impact removal and confirmation sampling is described in the Proposed Sampling Plan below.

### PROPOSED SAMPLING PLAN

#### Proposed Soil Sampling

☒ Will soil samples be collected as part of this investigation? ( Number, type (grab/composite), analyses, and locations of samples ):

Soil samples were collected for laboratory analysis of COGCC Table 915-1 constituents. One soil sample was collected from the wellhead and one soil sample was collected from a flowline segment. Prior to collecting confirmation soil samples, soil was field screened using a PID and visual/olfactory observations.

#### Proposed Groundwater Sampling

☐ Will groundwater samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

No groundwater was encountered during the initial assessment and sampling conducted on November 01, 2022.

#### Proposed Surface Water Sampling

☐ Will surface water samples be collected as part of this investigation? ( Number, analyses, and locations of samples ):

No surface water sampling was conducted.

### Additional Investigative Actions

☐ Additional alternative investigative actions described in attached Site Investigation Plan ( summary ):

Field personnel performed a visual/olfactory inspection of the site.

**OTHER INVESTIGATION INFORMATION**☐ Were impacts to adjacent property or offsite impacts identified?☒ Were background samples collected as part of this site investigation?

Background soil samples were collected from nearby, non-impacted native soil to establish background concentrations. Background samples were analyzed for Table 915-1 constituents. Background samples indicated pH values outside of the COGCC Table 915-1 range. Also, background samples indicated Arsenic values above the COGCC Table 915-1 standards. It is requested that background concentration be considered when evaluating the site for final closure.

☐ Was investigation derived waste (IDW) generated as part of this investigation?

Volume of solid waste (cubic yards)

Volume of liquid waste (barrels)

☒ Is further site investigation required?

Initial assessment and sampling occurred on November 01, 2022, and indicated soil impacts above COGCC standards. Lab results of sample SS02 indicated levels of Arsenic above COGCC table 915-1 standards. Further site investigation is required to fully define the horizontal and vertical extent of impacts at the site. Additionally, based on initial assessment and sampling results, a reduced list of analytes is requested for future sampling. It is requested that analytes that did not exceed COGCC Table 915-1 standards be removed from future sampling.

**REMEDIAL ACTION PLAN**

Does this Supplemental Form 27A include changes to a previously approved Remedial Action Plan? No

**SOURCE REMOVAL SUMMARY**

Describe how source is to be removed.

Based on results from the initial site investigation, a remediation plan will be created to address site impacts and will be documented on a supplemental Form 27.

**REMEDIAL SUMMARY**

Describe how remediation of existing impacts to soil and groundwater is to be accomplished (i.e. summarize remedial action plan). Provide a brief narrative description including: technical justification, schedule for implementation, estimated time to attain NFA status, plus plans and specifications for the selected remedial action technology.

Remediation will consist of removal of impacted soil and disposal at an approved disposal facility. Remediation activities would commence in 2023 and NFA status is anticipated by the end of 2023.
