The afternoon of 11/23/22 a water release outside of secondary containmen, all on pad from the transfer hose on the dehy tank was found to have came off during water transfer activitiies. The measurement calculation resulted in an estimate of 105 bbls of water from a dehy tank. All fluids remained on location. Upon discovery the release was immediately stopped. A couple of the puddles had a sheen on the standing water. Water recovery efforts are in progress.
