GAS CAPTURE

VENTING AND FLARING:

Operation type: Flaring _____

Operational phase requiring venting/flaring: Completions _____

Reason for venting/flaring: Safety

Describe Other reason for venting/flaring:

In accordance with Rule 903c(B)(i-iii): Chevron/Noble requests to combust/flare gas produced from the coil out process for a period of 48-hours per well, as necessary, prior to flowback. Combusting this gas is the best method to protect and minimize adverse impacts to public health, safety, welfare, and the environment. Flaring volume during this period is anticipated to be 200mcf-250mcf/day per well. Each well will be connected to a permanent facility prior to the first sale. The presence of H2S is not anticipated at this site.

Describe why venting or flaring is necessary. If reporting per Rule 903.b.(2), 903.c.(3).C, or 903.d.(2), include the explanation, rationale, and cause of the event:

Intermittent Flaring during Coil Out Activities as part of routine operations

Describe how the operation will protect and minimize adverse impacts to public health, safety, welfare, the environment, and wildlife resources. If reporting per Rule 903.d.(2), include BMPs used to minimize venting on the BMP Tab:

Flaring in place of no control/venting to atmosphere reduces the quantity of criteria pollutants released into the air, as well as disperses the particles so ground level impacts are negligible.

Total volume of gas vented or flared: 1000 mcf ☒ estimated ☐ measured

Total duration of emission event: 192 hours ☐ consecutive ☒ cumulative

Submit a single representative gas analysis via Form 43 to create a Sample Site Facility ID# for this Location. Reference the Form 43 document number on the Related Forms tab.

Sample Site Facility ID#: _____

GAS CAPTURE PLAN

Describe the plan to connect to a gathering line or beneficially use the gas; include anticipated timeline:

A Gas Capture Plan that meets the requirements of Rule 903.e is attached. ☐

H2S REPORTING

☐ Intentional release of H2S gas due to Upset Condition or malfunction.

☐ Intent to temporarily abandon well with potential H2S concentration >100 ppm.

Data Fields in this section are intended to document Sample and Location Data associated with the collection of a Gas Sample that is submitted for Laboratory Analysis.

Gas Analysis Report must be attached.

H2S Concentration: _____ in ppm (parts per million)

Date of Measurement or Sample Collection _____

Description of Sample Point:

Absolute Open Flow Potential _____ in CFPD (cubic feet per day)

Description of Release Potential and Duration (If flow is not open to the atmosphere, identify the duration in which the container or pipeline would likely be opened for servicing operations.):

Distance to nearest occupied residence, school, church, park, school bus stop, place of business, or other areas where the public could reasonably be expected to frequent: _____

Distance to nearest Federal, State, County, or municipal road or highway owned and principally maintained for public use: _____

Engineer	All four wells still have DG status but should actually be WO. Rig Release on Form 5 reported as 10/11/2022. Second Bradenhead test is due 6-9 months after rig release, prior to stimulation if the well is a DUC for 6 months or more.	02/21/2023
