Hi April,

Thank you for the opportunity to review the seed mixes for Musser 2 & 7. If you have soil texture or information on other site conditions (highly basic soils, saline soils, calciferous soils, metal-contaminated, etc.) I can be more specific in my analysis. All the species should be successful. I had some notes to share on the following:

- Western wheatgrass: The Arriba variety can outcompete other components of a seed mix. If possible, CPW would like to see this removed from the seed mix, since the 5 other grasses have a high likelihood of establishment. If it must be used, please apply at low rates.
- Indian ricegrass varieties: Paloma, White River, and wildland collected all have proven success in this area.
- Prairie junegrass varieties: Sims Mesa Germplasm and wildland collected have proven success in this area.
- Shadscale saltbush & winterfat: Wildland collected preferred.

Please reach out with any questions.

Thank you,

**Subject:** Wexpro Company Reseeding in HPH-Powder Wash

Taylor,

Per COGCC rules, I'm seeking your approval for the following actions that will require a form 4 submittal for Wexpro Company's seeding project located in High Priority Habitats:

- BW Musser 2 (05-081-60037, NWSW-4-11N-97W): reseeded of the final reclamation areas due to insufficient desirable vegetation
  - Greater sage grouse general habitat management area
- BW Musser 7 (05-081-05434, SWSE-4-11N-97W): reseeded of final reclamation areas due to insufficient desirable vegetation
  - Greater sage grouse general habitat management area

All areas will be drill seeded and crimped with straw mulch for moisture retention. In areas where drill seeding is not possible, seed will be broadcast, doubling the application rate. Both wells will be seeded with the proposed seed mix R034AY104WY.

Form 4's will be submitted upon your approval.

Thank you,

**April Stegall**
